

Our VOPC Use Case Analysis Conventions

1. We do not need to copy the analysis class stereotypes (Entity, Boundary, and Control) from our sequence diagram.
2. Every message shown in our sequence diagram should be shown in our VOPC as an analysis method/operation in one of our classes.
3. Every class shown in our sequence diagram should be shown in our VOPC. We do not model inheritance in our sequence diagram – we may model it in our VOPC.
4. For Use Case Analysis - we are still modeling **what** we are going to do. Not **how** we are going to do it.
5. Our class associations may show multiplicity if we know it. We will show classes communicating as they do in our sequence diagram. We may save association refinement for design.
